

## **B grade digital**

1. **Hygrocybe sp.**
2. **Otago Autumn**
3. **River Flow**
4. **Rickenella fibula - Orange Moss Agaric**
5. **Tiny Sand Crab**
6. **Wild Rabbits Mum and Dad**

### **Hygrocybe sp.**

This beautiful clump of Fungi are well focused, showing me where they are growing amongst moss. My only suggestion for improvement would be to crop 3cms off the left hand side. Well Done, a Good Effort Merit

Deb Corbett

### **Otago Autumn**

This was a good idea to enter an autumn image into this category. However I would like to see less shadow with more concentration of the golden poplars. Your subject is autumn so that should be the main focus in the frame. As it is there is less than a quarter of autumn trees in the image. NA

### **River Flow**

This is well executed, showing me in detail the water flowing. The rocks are well focused showing detail. The golden colour of the rocks underneath on the left give this an added interest. For improvement I would like to have seen a little more of the water from the top right. Good effort Merit

Helen Atkinson

### **Rickenella fibula**

Well done spotting this fungi, its colour is bright and showy. What lets this image down is most of the photo has no interest in it. For a nature image your subject should fill most of the frame to give it impact. I suggest you crop around the fungi which makes the image a vertical one. Keep looking and practice to fill the frame with your subject. Also this is a Hygrocybe species not a Rickenella species. NA

### **Tiny Sand Crab**

This is well focused and well seen. Seeing the detail markings on its legs and face is brilliant especially as it is on the sand with similar colours. It is well placed in the frame. A good effort. Honours

Jane Pordon

### **Wild Rabbits Mum and Dad**

Wow, Capturing 2 rabbits together in the grass is not easy to do. The muted out of focus background is excellent. It is good that you have captured their eyes well which gives you a focal point of interest. I love seeing the detail of their fur, whiskers and ears. You could crop about 3cms off the top to give it an improved balance. A good effort with a difficult subject. Well Done Honours

Jane Pordon
